Most of the time planned for building the alpha engine got put towards fixing the problems of the acoustic engine. The ideal efficiency of either Stirling engine is .837 using 1800 Kelvins for the temperature of a candle flame and 293 Kelvins as room temperature.

### Design and Analysis of Stirling Engines

The aim of this project was to design, build, and test a Stirling engine capable of generating between 200-500 watts of electricity. Several designs were studied before settling on an alpha type configuration based around a two-cylinder air compressor. Concentrated solar

### Design of a Stirling Engine for Electricity Generation

The alpha Stirling has two power pistons, separate hot and cold heat exchangers, a regenerator, and a flywheel. The hot side heat exchanger contains a piston and the cold side heat exchanger contains a piston. Typically no displacer is used. There is usually a high temperature difference between the two pistons.

A Beginner's Guide to Stirling Engines: Last year I was an IB student in the MYP program. At the end of the year we had to do a research project on something that interests us. Doing some research on the internet, I came across something called a stirling engine."So, what the heck is a st...

### A Beginner's Guide to Stirling Engines - Yours for the making

The mechanical configurations of Stirling engines are generally divided into three groups known as the Alpha , Beta , and Gamma arrangements. Alpha engines have two pistons in separate cylinders which are connected in series by a heater, regenerator and cooler. Both Beta and Gamma engines use displacer-piston arrangements, the Beta engine having both the displacer and the piston in an in-line cylinder system, whilst the Gamma engine uses separate cylinders.

### Alpha-Type Stirling Engine - Wolfram Demonstrations Project

The alpha-configured Stirling engine consists of two cylinders – a hot cylinder and a cold cylinder – connected by a regenerator or mass transfer tube. Each of the cylinders contains a power piston connected to the crankshaft; the movement of the hot cylinder piston leads the cold cylinder piston by a 90-degree phase shift.

### GREEN STIRLING ENGINE POWER PLANT

Alpha-type Stirling engine. There are two cylinders. The expansion cylinder (red) is maintained at a high temperature while the compression cylinder (blue) is cooled. The passage between the two cylinders contains the regenerator.

### CNCCookbook: Stirling Engine Models

Stirling Engine Efficiency The potential efficiency of a Stirling engine is high. It is comparable to the efficiency of a diesel engine, but is significantly higher than that of a spark-ignition (gasoline) engine. One of the most efficient Stirling engines ever made was the MOD II automotive engine, produced in the 1980's.
