“Analog Modulation” is the subject concerned ... Analog communication system The most common carrier is the sinusoidal wave. Carrier wave (Analog) 2.1 Introduction Modulation A process by which some characteristic of a carrier ... The above technique may not be applicable to a DSB-SC signal like below. Why? SSB

Analog Modulation” is the subject concerned

Modulation technique is used for its faithful passage through the channel ; it is of following types: 8. • ANALOG MODULATION. The analog signal is used as a carrier signal, that modulate the message signal, mainly they are in the form of sinusoidal waveform. So, we can alter their frequency, amplitude and phase.

Lecture Notes for Analog and Digital Communication Systems

In analog modulation sinusoidal signal is used as carrier where as in digital modulation pulse train is used as carrier. Need for modulation: Modulation is needed in a communication system to achieve the following basic needs 1) Multiplexing 2) Practicability of antennas 3) Narrow banding
