Analysing Requirements And Designing Solution

Solution requirements in a business analysis specify the conditions and capabilities a solution has to have in order to meet the need or solve the problem and provide clarity around delivery needs. They don't define how the solution will solve the problem technically or specifically; that happens later. Solution requirements must meet or support the driving project and business objectives, in addition to meeting stakeholder objectives.

How to Define Solution Requirements through Business Analysis

Solutions are grouped with the other five core concepts: value, need, change, stakeholder, and context. Requirements are grouped with dozens of 'key terms', such as design, plan, risk, domain, scope, organization, and many more. Key terms are not subsets of core concepts, or contained within a single core concept.
