Coordinated distributed experiments (CDEs) – experiments run in parallel by several research groups in multiple locations around the globe – have the advantage of simultaneously addressing global environmental problems and exploring general ecological theory, while offering the inherent pre-cision of controlled experiments.

data systems, authentication is generally handled by coordinated systems independently. Thus, the focus of distributed system security schemes is on authorization, which is more complex than for non-distributed systems, because of the need to synchronize access privileges among the coordinated systems.
