surface disease, ocular pain and corneal disease, infection or trauma.

Lesson: Understanding Corneal Nerve Function—and Dysfunction

Cranial nerves are responsible for the control of a number of functions in the body. Some of these functions include directing sense and motor impulses, equilibrium control, eye movement and vision, hearing, respiration, swallowing, smelling, facial sensation, and tasting. The names and major functions of these nerves are listed below.

Names, Functions, and Locations of Cranial Nerves

There are four cranial nerves with primarily motor function. Link to Corticobulbar. CN IV, Trochlear, innervates the superior oblique muscle of the eyeball. CN VI, Abducens, innervates the lateral rectus muscle of the eyeball and abducts the eye. CN XI, Accessory, innervates the trapezius muscle in the back and shoulders.
