Health-related policy and its implementation is complex. Conceptual models can help show the flow from health-related policy development to health-related policy and program implementation and to health systems and health outcomes. Policy should be understood as more than a national law or health policy that supports a program or intervention.

Health policy - Wikipedia

In addition, opportunity depends in part on demand. The global need for contraception by married or “in-union” women is projected to increase to 800 million by 2030. Projections vary by region, but the combination of substantial growth in global population in the reproductive years and modest growth in prevalence of contraceptive use means substantial growth in global demand for contraception.
