## **The intuition is the real economics - Alt-M**

Intuitive statistics, or folk statistics, refers to the cognitive phenomenon where organisms use data to make generalizations and predictions about the world. This can be a small amount of sample data or training instances, which in turn contribute to inductive inferences about either population-level properties, future data, or both. Inferences can involve revising hypotheses, or beliefs, in light of probabilistic data that inform and motivate future predictions. The informal tendency for cogni

The reason that economists use the word intuition, I think, is that they think they're doing an exact science and need a lot of mathematics, which is a very basic mistake since economics is a social science, and in my opinion much more suitable for 'normal' language. Mathematics should be a tool of economics, not nearly an equivalent of economics.
