The nature of distributed computation in complex systems has often been described in terms of memory, communication and processing. This thesis presents a complete information-theoretic framework to quantify these operations on information (i.e. information storage, transfer and modification), and in particular their dynamics in space and time.

a simple machine: the 3 state, 2 symbol Busy Beaver (I assure you I did not make this name up). The Busy Beaver is notable not because it has great practical use, but because it represents a kind of “maximally busy” machine — of all possible 3 state Turing machines, it writes the most “1” symbols to the tape before finally halting.
